This extensive form will help us to understand your individual needs. Please answer all questions to the best of your knowledge.

You will be asked for contact and payment information when you proceed to checkout.

To view a sample Custom Spray Program, [click here](#) (coming soon).

Insects, mites and disease organisms can develop resistance to a specific pesticide if that product is used repeatedly. Resistance can eventually lead to product failure and the creation of a "superbug". This is one of the reasons we carry such a wide assortment of plant protection chemicals. By offering alternatives we can create spray programs to disrupt the target pest's ability to build resistance.

If you are interested in Custom Spray Programs for other crops, please contact us by email at [info@rosecare.com](mailto:info@rosecare.com) or call (805) 569-2257.
